Reason/Objective of the disposal (to be filled by maintenance department)

The Dowson Colunio 9000S machine is purchased as used machine in 2009. This machine is used to produce Fruity in 73mm Dia cups. We are having major problems on this machine. The filling unit is not working properly because of the flow meter. The heater are not available with OEM supplier. We have modified the heater block in 2017. There is problem with PLC and HMI they suddenly shutoff and re-start machine power. For this problems we have contacted OEM supplier for Solution. They have suggested that this model machine are Obsolete. They are also not supporting for spare parts. The existing cassettes are of 73mm Dia size, but we have changed the cup size to 75mm dia. These parts are also not available with OEM supplier. By removing this machine from floor we will have space to organize the other machines.
