Reason/Objective of the disposal (to be filled by maintenance department)

The Cemre Makina-2 Liter Bottle filler machine is purchased in 2017 at the time of embargo as capacity enhancement. This machine is used to produce 2-liter Fresh Laban and Laban Arian. We are having major problems on this machine. The filling unit is not working properly because of the Hydraulic unit. The product is getting spilled on the machine, bottles are getting damaged. The capper unit is not properly tightening the cap. The major issue on the machine is filling variation, filling is not constant in all the bottles. OEM had visited many time to solve the issue but not succeeded. After lengthy negotiation with the OEM he had given 1-liter rotary bottle filler as compensation with discounted prices. After purchase of 1-liter machine the OEM had conflict regarding Payment. Due to conflict OEM stopped supporting Dandy company in all ways (Spare parts, Technical support). After that the PLC program is corrupted and machine started malfunctioning. we have tried with internal resource to solve the issue but the problem is not solved.

Considering product losses we stopped using this machine from 2021, currently the machine is installed in Plant 2 next to quality lab. We are planning to extend quality lab by dismantling this machine. Since other permanent structure are constructed around the machine practically it is not possible to remove the machine intact, we will have to cut it into pieces for removing.
